

COMPUTER LEARNING CENTER

Students in grades K-8 have computer class at least once per week. Students are taught keyboarding and other computer usage skills, including the use of Google Apps and Microsoft Office. Internet safety practices in addition to responsible and ethical computer use are also emphasized. Students also have the opportunity to learn coding skills and participate in coding competitions. All K-3 students are in the computer center one additional session per week, using a variety of web-based programs, for skill practice, remediation or enrichment.
